

Blackberry 7.1 Update:

The BlackBerry 7.1 OS update offers some great new features:

- **Mobile Hotspot:** Turn your BlackBerry 7.1 OS device into a Wi-Fi® router anywhere, anytime! The new OS seamlessly provides Internet access for up to five Wi-Fi devices, including laptops and tablets.

- **Universal Search:** For this new release, we wanted to focus on the intelligence of our system and our apps – in other words, we wanted to create an intuitive experience that does the thinking for you. For example, Universal Search now has a new auto-suggest feature that intelligently filters Bing® search results to offer you a variety of relevant Web sites based on your search terms.

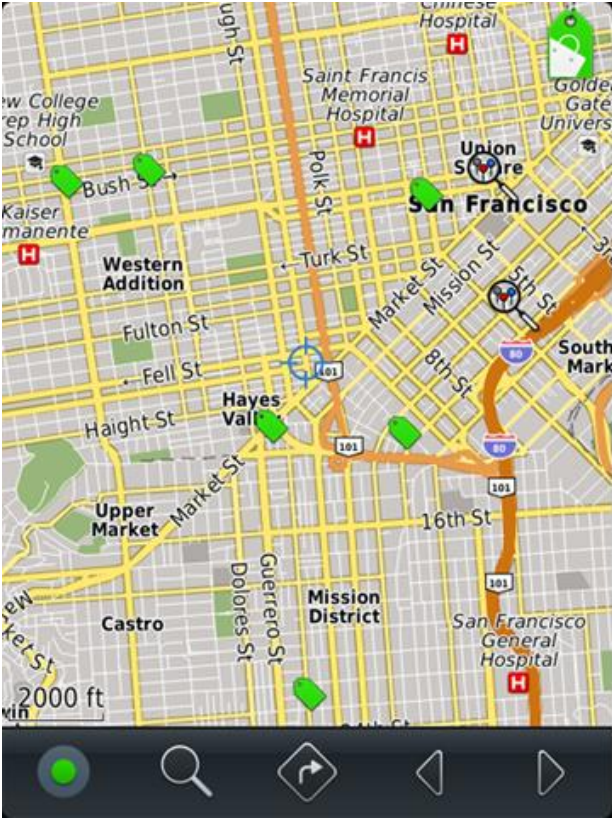

- **BlackBerry® Tag:** Share contacts, media and files, and even invite friends to BlackBerry® Messenger (BBM) through a simple touch. BlackBerry Tag unlocks near field communication (NFC) capabilities for everyday use and makes sharing a lot faster and much more personal.

- **FM Radio:** The BlackBerry 7.1 OS update will let BlackBerry® Curve™ 9350 and BlackBerry® Bold™ 9930 smartphone customers enjoy FM radio. Both models include a built-in FM radio so you can tune in to local FM radio stations. Simply plug in your headset to boost the reception (it acts as the antenna). Plus, no data usage or data plan required!

- BlackBerry® Maps:

When you launch the new BlackBerry Maps you'll be able to discover special offers, coupons and discounts from nearby vendors – and, of course, you can act instantly by calling about the deal, finding the best route to get there, or grabbing the coupon code.
