**ANDROID Wi-Fi Hotspot guide:**

C Spire provides a user guide to activate your Android Wi-Fi hotspot to share your wireless phone’s data connection to another Wi-Fi enabled device.

The $20 tethering pass for 1GB applies to all types of attempted tethering methods.

The following C Spire devices support Wi-Fi hotspot tethering:
- Samsung Admire
- Samsung Repp
- LG Optimus 2
- LG Ignite
- Sony Ericsson Xperia Play
- *more new Android devices to be added as they launch*

If your device is not shown in the list above, C Spire recommends you visit your phone manufacture’s website for support.

**How to activate your Android phone’s Wi-Fi Hotspot to enable tethering:**

1. From the home screen of your Android, press the **Menu** key.
2. Touch **Settings**
3. Touch **Wireless & networks**
4. Touch **Tethering & mobile hotspot**
5. You will see a screen similar to the following. Touch **Portable Wi-Fi hotspot** to enable tethering and your device’s Wi-Fi hotspot will be activated.
- Touch **Portable Wi-Fi hotspot settings** to manage your Wi-Fi hotspot. You can configure the following Wi-Fi settings for your device:
  - **SSID** – This is the name of your Wi-Fi hotspot connection. Select this from your Wi-Fi enabled device to connect. You can also rename this connection.
  - **Security** –
    - Select **Open** if you do not want to use a password to connect to your phone’s Wi-Fi hotspot.
    - Select **WPA2 PSK** to require a password to access your phone’s Wi-Fi hotspot. C Spire recommends using WPA2 PSK to ensure unknown users do not access your data connection.
  - **Password** – only used when Security type is set to WPA2 PSK
  - **Max Users** – set the number of user connections you want to allow access your Wi-Fi Hotspot.
  - Advance users may configure other options, but not required for establishing a Wi-Fi Hotspot connection.

To connect to your Android device’s active Wi-Fi Hotspot follow your Wi-Fi enabled device (laptop, tablet, etc.) instructions to connect to a wireless network.
