

iPhone Personal Hotspot guide:

C Spire provides a user guide to activate your iPhone Wi-Fi Personal Hotspot to tether your phone to another Wi-Fi enabled device and share the phone's data connection.

The \$20 tethering pass for 1GB applies to all types of attempted tethering.

How to activate iPhone's Wi-Fi Personal Hotspot

- Tap **Settings > General > Network:**
- Tap Personal Hotspot and turn it on.

- If prompted, Tap "Turn on Wi-Fi and Bluetooth"

- If you see “Set Up Personal Hotspot”, your wireless plan is not configured for this feature or you may have opted out of tethering. If you see this message and wish to enable your Personal Hotspot, please contact C Spire at **1855CSPIRE5**.
- After configuring Personal Hotspot, you can directly access the settings from **Settings > Personal Hotspot**.

Note: In some instances you may need to re-enable Personal Hotspot after restarting your phone. Up to 5 devices can connect to your iPhone Personal Hotspot using Wi-Fi.

To connect to your iPhone device’s active Wi-Fi Hotspot follow your laptop or other internet connected device instructions to connect wireless network.
